#### **DETAILED ACTION**

Applicants' drawings filed April 27, 2005; and the preliminary amendment filed April 14, 2006 have been received and entered.

Due to the complex nature of the claims, no request for an oral election is being made. Please see MPEP 812.01.

#### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-35 are drawn to a method for deterring, inhibiting, preventing or reversing stenosis, restenosis or unwanted proliferation of cells in blood vessel walls or other anatomical structures of a human or veterinary patient by administering to the patient a therapeutically effective amount of a compound having the structure formula I, classified in class 514, subclass 183.
- II. Claims 36-46 are drawn to a device for implantation in a stenotic blood vessel, classified in class 604, various subclasses.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process.

The two inventions have separate status in the art as shown by their different classification and separate subject matter for inventive effort. Further, a reference, which anticipates any one of the above inventions, would neither anticipate nor make obvious of the other inventions. Each such invention is capable of supporting its own patent. For these reasons, the restriction requirement is proper.

To be complete, applicants' response must include a provisional election even though the requirement may be traverse.

The applicants are required to elect a single invention for examination purposes.
